

Vehicle device for : easy parking /easy replacing a flat tire

Purpose of the device

1. Parallel parking -- entering and existing without the use of a steering wheel.

Entering the parking space:

I press the button that raises the four rubber wheels that are located in the vehicle next to the screen showing the position of the vehicle, according to the vehicle parking behind mine and ahead of me (another option is through the mobile application on the left button). The four rubber wheels located 90 degrees in the groin to the vehicles wheels; flatten out and lift the vehicle above its usual wheels, I press the drive button in order to park which is located inside the vehicle (or, on the mobile phone app on the drive button to the parking lot, the vehicle goes on the rubber wheels to the parking lot).

Exit the parking lot:

The same operation is carried out as while exiting the parking space, however; the button is different this time press the exit from the parking space button. Upon the vehicle exiting the parking space and is ready to continue on its way, I press the button to bring down the four rubber wheels. The rubber wheels are folded into the vehicle's undercarriage. I start the vehicle and continue on driving.

2. Replacing a tire without using a jack

It turns out that there is a flat tire in the rear left wheel of the vehicle. I step out of the vehicle go to the rear left wheel, open all the wheel nuts. Press the button on the rear left wheel I press the wheel lift in the mobile phone application (or from the vehicle in the left rubber wheel button located inside the vehicle near the screen that shows The four rubber wheel lift buttons (the rear left rubber wheel located at 90 degrees in the vehicle's undercarriage, aligns out and lifts the left rear wheel over the rear left rubber wheel. I remove the tired wheel, and replace it with a new tire, I then screw on all the nuts on tightly. I press on the button for bringing down the left rubber wheel through the mobile app on my phone (or from the vehicle on the screen that shows the four rubber wheel lift button) the rear left rubber wheel folds inwards to the undercarriage and I can proceed to drive.
